

Automatic Product Upload via XML Files

Udora lets you bulk upload multiple products or an entire catalogue at once using XML import files.

For automatic uploading and updating of your shop's inventory, you need a feed — a file that contains all key details about each product: price, description, photos, composition, dimensions, discount information, stock levels, and minimum order quantity.

You can export the feed from your website or CRM system yourself, or ask your web developers to do it. To avoid errors during import, make sure the XML file's structure is correct and all Required tags are filled in.

This is what a feed looks like in XML format:

```
<yml_catalog date="2026-03-19 12:39">

  <shop>

    <name>Helialoni</name>

    <company>Helialoni</company>

    <url>https://helialoni.lv</url>

    <categories>

      <category id="4">For Girls</category>

      <category id="25">Birthday</category>

    </categories>

  </shop>

  <offers>

    <offer id="653" available="true">

      <url>

        https://helialoni.lv/products/myatnyj-nabor-na-8-marta

      </url>

      <name>Mint Set for March 8th</name>

      <categoryId>7</categoryId>

      <picture>
```

</picture>

<price>85.20</price>

<currencyId>EUR</currencyId>

<description>

Set includes: Number 1 balloon bouquet: 2 hearts 45 cm (one with the inscription "Happy March 8th!"), 4 balloons 30 cm pastel, 2 balloons 30 cm with confetti, 2 balloons 30 cm metallic 2 hearts 45 cm metallic (one with the inscription "Happy March 8th!") 2 weights 2 bags for transportation Total number of balloons: 11 Filling: All balloons with helium

</description>

<param name="length, mm">2000</param>

<param name="width, mm">2000</param>

<param name="height, mm">2000</param>

</offer>

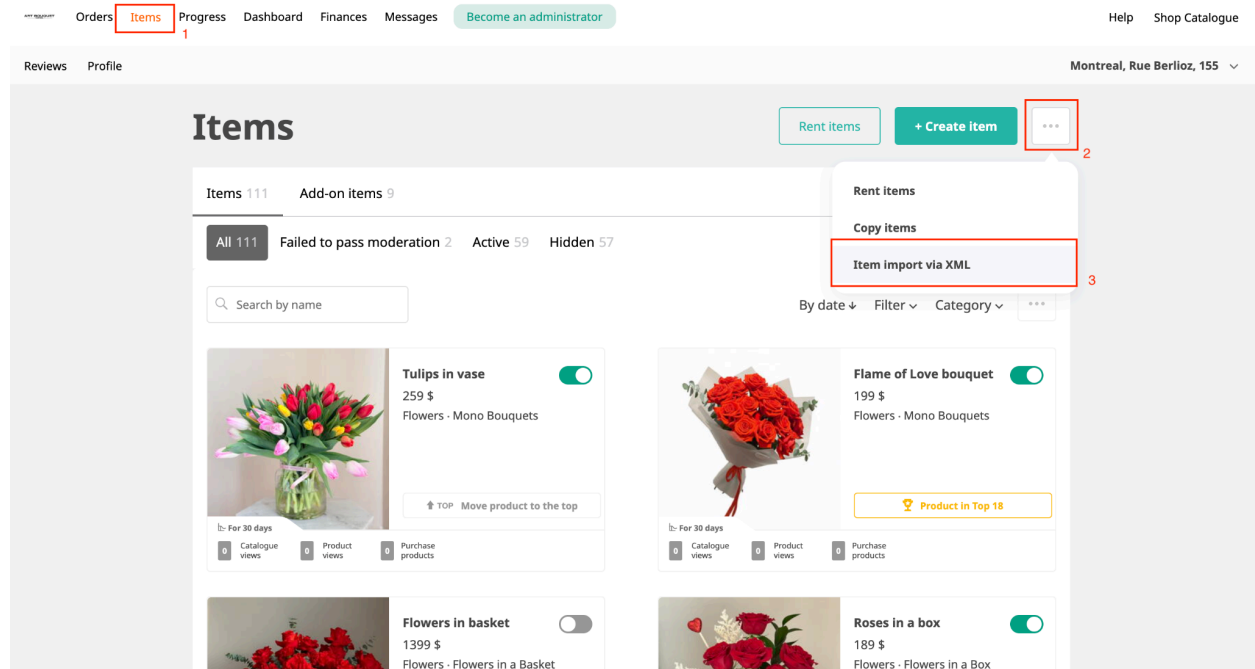

</offers>

</yml_catalog>

Starting the Import

To begin importing, log in to your Udora seller account on the web and go to Items:

1. Click on the three dots in the top right corner (next to the Rent items button)
2. Choose Import products via XML
3. You can either upload a file from your device, or set up import by URL

Import via URL

If your feed is located on another website and you set up import by URL, Udora will regularly fetch the file and automatically update the product data (photos, prices, stock, etc.).

Before submitting the URL, make sure that:

- The feed is accessible via HTTP or HTTPS (the URL should start with http:// or https://)
- The URL has no extra spaces and opens correctly
- The feed is in .xml format
- Access to the feed is open and does not require login
- File size is up to 30 MB

To set up import by URL:

1. Paste the feed URL into the File URL field
2. Select the appropriate category and subcategory for your products
3. Specify the product type: ready-made or main
4. Click Upload

Item import

XML import of products

XML File Requirements

Link File

Link to the file

The main category and sub-category of products

You will be able to distribute the products in more detail before adding them to the catalogue.

Product category

Product subcategory

Production time

☒ The products are ready for sale

☐ It takes time to prepare it

Upload

Once the preliminary upload and category mapping are done, you can enable auto-updates and set an interval (in hours or days). After the first import, the data will update automatically. If you need to update manually, just click the Refresh button.

Import via File

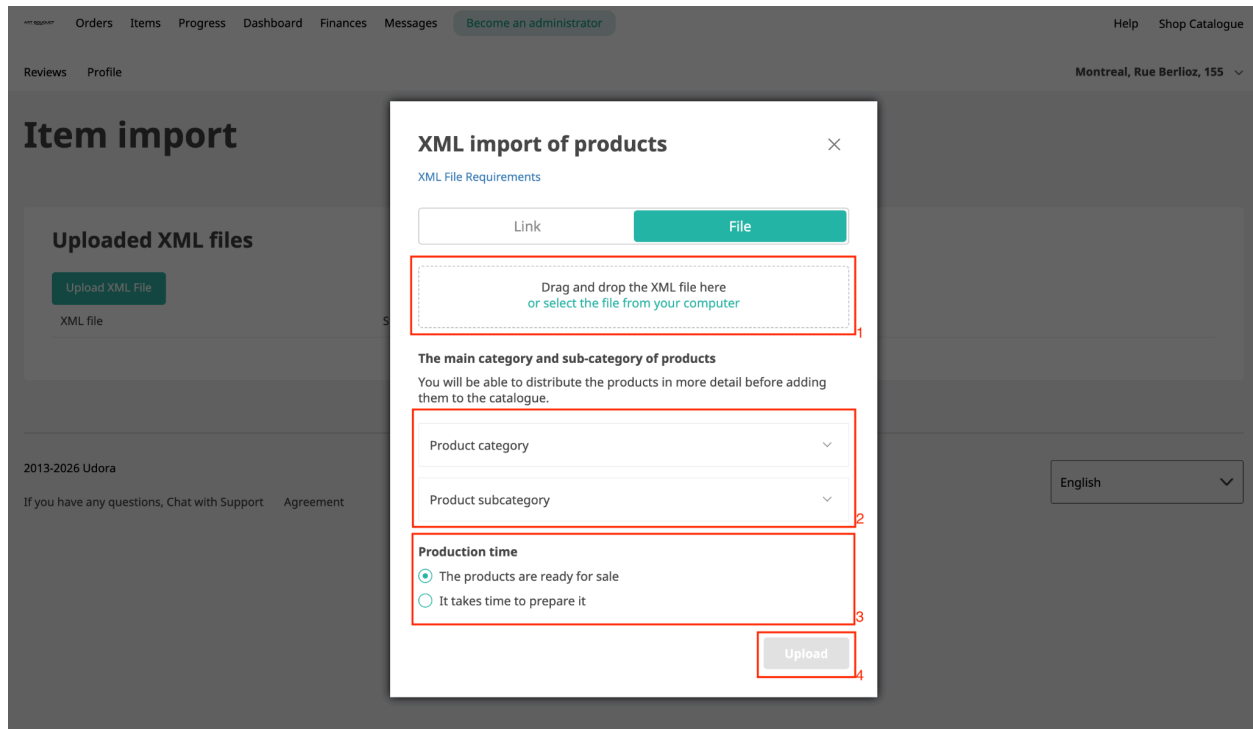

If you upload an XML file from your device, the products and all their characteristics will be added to your catalogue, but they will not update automatically.

Before uploading, check that:

- The file is in .xml format
- File size is up to 30 MB
- The feed structure meets the tag and unique ID requirements

To import products from a file:

1. Upload the XML file from your device
2. Select the category and subcategory for the products
3. Specify the product type: ready-made or main
4. Click Upload

After uploading, the products will appear in your catalogue. To update them later, you will need to re-upload the file, since automatic updates are not supported with file uploads.

When a feed is uploaded or updated, Udora shows a processing status:

- Uploaded — file has been received (not processed yet)
- Parsing — the XML structure is being processed
- Completed — processing finished successfully
- Failed — processing ended with an error
- Partially_completed — processing finished with some errors

Feed Requirements for XML File Structure

Your feed must include the following mandatory elements for each product: ID, name, image, description, and price. You can also include additional product details like composition, dimensions, etc.

To speed up processing, it's best to use only the elements listed below; any unknown or invalid tags will be ignored by the system.

General Elements

Element	Description	Requirement
<code>xml header</code>	The standard XML declaration. It must be the very first line of the file (starting from character 0)	Required for the XML format
<code>shop</code>	Contains <code>name</code> (short company name), <code>company</code> (official name), and <code>url</code> (link to the shop's home page)	Required
<code>offers</code>	The list of products. Each product should be described in a separate <code>offer</code> or <code>product</code> element	Required

Product information

Element	Description	Requirement
<code>offer</code> or <code>product</code>	Tag for each product. Each product is described in its own element and can include the attribute <code>available</code> . For example: <code><offer available="true"></code>	Required
<code>id</code>	A unique identifier for the product. Can only contain digits and Latin letters, up to 20 characters	Required

<code>url</code>	Link to the product page. Maximum length – 2048 characters	Required
<code>categoryId</code> / <code>category_id</code>	Category of the product (ID or name). If the category does not match one on the platform, you'll need to pick a new category	Required
<code>name</code> / <code>model</code>	The product name. Each product must have a unique name. Optimal length is 60–120 characters	Required
<code>available</code>	Indicates whether the product is available for order. Possible values: <code>true</code> (active) or <code>false</code> (hidden).	Desired
<code>currencyId</code>	Currency of the price (AED, USD, EUR, UAH). The price and currency must correspond	Desired
<code>price</code>	Product price	Required
<code>oldprice</code>	Previous price (used to show a discount)	Required
<code>picture</code> / <code>image</code>	Link to a product photo. You can add multiple photographs using separate tags; the first one will be shown in the catalogue	Required
<code>description</code>	Detailed product description. We recommend including key features and care instructions	Required

Product Characteristics

Element	Description	Requirement
<code><param name="width, mm"></code>	Product width in millimetres. Value can be a whole or decimal number	Required, except for Gift Cards
<code><param name="height, mm"></code>	Product height in millimetres. Value can be a whole or decimal number	Required, except for Gift Cards
<code><param name="length, mm"></code>	Product length in millimetres. Value can be a whole or decimal number	Optional
<code><param name="size"></code>	Combined dimensions (Length × Width × Height). Can be used instead of separate size parameters	Required for Gift Cards, Clothing, Shoes categories
<code>consist</code>	Product composition. Example: <code><consist name="cotton" unit="pcs">3</consist></code> . Each <code><consist></code> tag should specify a component name and quantity (supported units: pcs, g, ml, oz) and the quantity must be greater than 0. Use one tag per component. This tag is only relevant for categories where each component is listed with a quantity (not for Confectionery, for example)	Required for Flowers and Gift Sets categories

<code>weight</code>	Product weight in kilograms. Value can be a whole or decimal number (decimal point or comma, up to three decimals)	Required for Confectionery, Coffee, Tea, and Tea & Coffee Sets categories
<code>qty / quantity / count / amount</code>	Quantity in stock. Default is 1. For products that have a production time (e.g. Flowers), do not set <code>qty</code> manually	Required for Single Flowers and Gift Cards categories
<code>quantity_in_package</code>	Quantity per package	Required for Flowers Wholesale category
<code>minorder</code>	Minimum quantity per order	Optional
<code>adult</code>	Indicates 18+ content (for category Other or any 18+ items). Values: <code>true</code> (contains 18+ content) or <code>false</code> (no 18+ content)	Required for category 18+

Gift Cards

For products in the Gift Cards category, you must specify at least one of the elements determining delivery type:

Element	Description	Requirement
<pre><param name="Type of certificate">For services or goods</param> <param name="Type of</pre>	Certificate type	Optional. Applied to Gift Cards category

<code>certificate">For a specific amount</param></code>		
<code><param name="Type of delivery">material media</param></code>	Delivery type: <code>material media</code> – physical delivery by post	It is mandatory to include at least one delivery-type tag. Additional tags for delivery type are optional
<code><param name="Type of delivery">electronic key</param></code>	<code>electronic key</code> – electronic delivery (by SMS or courier)	
<code><downloadable>>false</downloadable></code> or <code><downloadable>true</downloadable></code>	Delivery type: <code>false</code> – physical delivery by post <code>true</code> – electronic delivery (by SMS or courier)	

Unsupported Tags

Any elements not listed above (for example, `pickup`, `store`, `barcode`, etc.) will not be recognised by the system and will not appear in product cards. Also, the system does not support (and may remove) constructs that could cause import errors, such as:

```
'/<!DOCTYPE\b/i',           '/<!ENTITY\b/i',           '/\bENTITY\s+%/i',
'/SYSTEM\s+["\'](?:file|https?|ftp):/i',
'/PUBLIC\s+["\']["\']*["\']\s+["\'](?:file|https?|ftp):/i'/'/<!DOCTYPE\b/i',
'/<!ENTITY\b/i',           '/\bENTITY\s+%/i',           '/SYSTEM\s+["\'](?:file|https?|ftp):/i',
'/PUBLIC\s+["\']["\']*["\']\s+["\'](?:file|https?|ftp):/i'
```

Errors and Troubleshooting

After you upload the feed in your seller account, any errors will be listed with explanations. To proceed, correct the indicated fields in your feed and upload it again.

If the feed was uploaded with errors, delete it before re-uploading. Uploading and updating items is not instant — processing time depends on queue position and the number of products and images.

Common Errors and Solutions

Error	Reason	Solution
File does not load when opening the import window	The file structure may be incorrect	Use an XML validator to check and fix the structure (ensure all opening tags have matching closing tags)
File does not upload (even after the import window pops up)	The feed is too large	Split the feed into smaller parts if it contains more than ~2,500 products or many images, and upload them one by one
Some or all products are not added	Unsupported special characters in descriptions (e.g. <code>![CDATA[</code> , <code></p></code> , <code>data-slate</code> , etc.)	Remove these characters from descriptions, as they may not be supported
	Decimal values in <code><length></code> , <code><width></code> , <code><height></code> , <code><price></code> , or <code><weight></code> tags	Use whole numbers instead of decimals. If these values come from your descriptions, ensure they are whole numbers there too

	Empty tags (e.g. <code><price></price></code>)	Fill in all Required tags with valid values
Feed does not load after corrections	The system needs time to update data	Wait about an hour for full processing (in rare cases it may take longer)
Products are not updating automatically	They might be under moderation or banned	Manually add the updated data both in the product card and in the feed, and then wait for approval. After approval, the product will update automatically. Important: do not re-upload the feed in this case, as you would lose your stats
Products from Flowers or Edible Bouquets categories are not loading	The feed contains quantity tags (<code><amount></code> , <code><count></code> , <code><qty></code>) which conflict with these categories	Remove the quantity tags from the feed and re-upload, specifying instead the production time needed for the product
Products are hidden	Items from the previous feed that are missing in the new one are automatically set to hidden	Ensure all desired products are present in the new feed; add any that are missing. You can also remove the hidden status manually in the admin panel
	Tags <code><amount></code> , <code><count></code> , or <code><qty></code> have value 0	Ensure the quantity for each product is more than 0

Updating the Feed

The system supports both automatic and manual updates of your product catalogue via the feed. Automatic updates are only available if you imported the file by URL. If you imported from a file, you must update by uploading the file again.

Update principles:

- The system matches products by their ID
- If an item already exists (same ID), its details (price, availability, description, photos) will be updated
- Any new items with unique IDs in the feed will be added to the catalogue
- If items from the previous feed are missing in the new one, they will be marked as hidden. (You can also hide them manually using the `<offer id=".." available="false">` tag)
- If you delete a feed in your account (using the Bin icon next to its link), all products loaded from that feed will be automatically deleted. Be sure to wait until the "deletion in progress" banner disappears; otherwise the feed will be removed but the products will remain listed.

For the update to work correctly, product IDs in the new feed must match those in the old feed. If they differ, the system will give an error stating that a product with that name already exists.
